Setup

Instructions to install and run the application-

1. MovieTicketBooking project is a server side implementation. MovieTicketBooking_Client project is a client side implementation. Import both the projects into netbeans IDE.
2. Deploy the MovieTicketBooking project by right click- > Select Deploy. Which is basically our web-service.
3. Run MovieTicketBooking_Client file in MovieTicketBooking_Client project, which is our client side to consume the web-service.

Database setup-

1. Install MySQL workbench.
2. Run below scripts to create the tables. –

1. CREATE TABLE `moviesInfo` (
   `id` int(11) NOT NULL AUTO_INCREMENT,
   `movie_name` varchar(45) DEFAULT NULL,
   `available_tickets` int(11) DEFAULT NULL,
   PRIMARY KEY (`id`)
) ENGINE=InnoDB AUTO_INCREMENT=5 DEFAULT CHARSET=latin1;

   MoviesInfo table stores the movies name and available tickets count for that movie.

2. CREATE TABLE `login` (
   `ID` int(11) NOT NULL AUTO_INCREMENT,
   `username_session` varchar(45) NOT NULL,
   `operation` varchar(45) NOT NULL,
   PRIMARY KEY (`ID`)
) ENGINE=InnoDB AUTO_INCREMENT=60 DEFAULT CHARSET=latin1;
